NOV19 (November 19): White Paper

Version 1.0 · November 2026 · A second chance for the people who missed the big ones

1. Introduction

Everyone has a story about the coin they missed. The one they heard about too late, the one they doubted for a week too long, the one that went from nothing to everything while they were looking the other way. NOV19 was built for those people.

NOV19, short for November 19, is a community meme token on the Solana blockchain. Its name and spirit come from the excitement around GTA 6, a release a whole generation has been waiting for. We took that energy and asked a simple question: what if the next big thing didn't leave the latecomers behind?

NOV19 is not trying to reinvent finance. It is a meme coin with a clear purpose, a transparent supply, locked liquidity, a staking system, an airdrop program and a lucky draw game that gives holders a real shot at winning the latest games and more. That is the whole pitch, and we would rather say it plainly than dress it up.

2. Vision and Mission

Vision. A community where being early is not a privilege reserved for insiders, and where every holder has a path to participate in rewards.

Mission. Give people who have missed past opportunities a fair entry point, a transparent token structure, and ways to earn that go beyond hoping the chart goes up.

3. Why NOV19 Exists

Most meme coin launches have the same problem. A small group gets in first, the early supply sits in a few wallets, and everyone else buys the top. We designed NOV19 around the opposite idea:

- A large share of supply goes into the liquidity pool, so the market has depth from day one.
- A dedicated airdrop pool rewards the community directly.
- A lucky draw gives small participants a chance to win, not just large ones.
- Liquidity is locked, so it cannot be pulled out from under holders.

The result is a project built around participation, not exclusivity.

4. Token Overview

Detail	Information
Name	NOV19 (November 19)
Ticker	$NOV19
Blockchain	Solana
Total supply	100,000,000,000,000 (100 trillion)
Launch date	19 November 2026
Wallet support	Phantom and other major Solana wallets

The total supply is fixed. No hidden minting, no surprise inflation.

5. Tokenomics

5.1 Allocation

Allocation	Share	Tokens
Liquidity pool	50%	50,000,000,000,000
Presale	20%	20,000,000,000,000
Team	15%	15,000,000,000,000
Airdrop	10%	10,000,000,000,000
Developer	5%	5,000,000,000,000
Total	**100%**	**100,000,000,000,000**

The formula behind every line in that table is simple:

Tokens allocated = Total supply × Allocation percentage

For example, the presale allocation is 100 trillion × 0.20 = 20 trillion NOV19.

5.2 What the numbers say

Half of all NOV19 (50%) goes straight into the liquidity pool. Add the presale and airdrop shares and you get 80% of supply aimed at the market and the community. Team and developer holdings together make up the remaining 20%.

Community-facing share = 50% + 20% + 10% = 80%

Insider share = 15% + 5% = 20%

That balance is deliberate. A project that wants long-term holders should keep its insider share small and visible.

5.3 Team and developer tokens

Team and developer tokens together make up 20% of supply. Their wallet addresses will be published on the official website so anyone can verify them.

6. Liquidity and Pricing

On decentralized exchanges (DEXs), NOV19 trades against a liquidity pool. Pools like this follow the constant product rule:

$x \times y = k$

where *x* is the amount of NOV19 in the pool, *y* is the amount of the paired asset (for example SOL), and *k* is a constant that stays the same during trades. The spot price follows directly:

Price of 1 NOV19 = $y \div x$

6.1 A worked example

These numbers are only an illustration of how the math works, not a price target or forecast.

Suppose the pool holds x = 50 trillion NOV19 and y = 500 SOL.

- Spot price = 500 ÷ 50,000,000,000,000 = 0.00000000001 SOL per NOV19
- A buyer spends 10 SOL. Tokens received = $x \times \Delta y \div (y + \Delta y)$ = 50T × 10 ÷ 510 ≈ 0.98 trillion NOV19
- Price impact of that trade ≈ $\Delta y \div (y + \Delta y)$ = 10 ÷ 510 ≈ 1.96%

The takeaway: the deeper the pool, the smaller the price impact of any single trade. This is why NOV19 puts the largest share of supply into liquidity.

6.2 Locked liquidity

The liquidity pool tokens are locked. That means the liquidity cannot be withdrawn by the team, which removes one of the most common ways holders get hurt in this space. The lock duration and the on-chain proof will be published on the official website and linked from our community channels.

7. Presale

The presale is the first phase of the roadmap and closes before midnight on 19 November 2026, the launch date.

Participants connect a Solana wallet on the official website and contribute to receive NOV19. The number of tokens you receive is:

Tokens received = Contribution ÷ Presale price

The presale allocation is 20 trillion NOV19. Once the presale ends, trading opens on a DEX and the market sets the price from the liquidity pool, as described in section 6.

A note on honesty: the presale price and the listing price are two different things. The listing price is determined by the pool ratio (y ÷ x), not by promises. Nobody can tell you in advance whether the listing price will be higher or lower than the presale price.

8. Airdrop

10 trillion NOV19 (10% of supply) is reserved for the community airdrop. Eligibility requirements are published on the official website, so anyone can read exactly what is needed to qualify.

If the pool is shared equally between qualifying wallets, each wallet receives:

Airdrop per wallet = Airdrop pool ÷ Number of eligible wallets

For illustration only: with 50,000 eligible wallets, each would receive 10 trillion ÷ 50,000 = 200 million NOV19. More wallets mean a smaller share each, so early participation matters.

9. Staking

Holders can stake NOV19 through the official website. Staking is flexible, which means there are no fixed lock periods and you stay in control of your tokens. Reward rates and details are shown on the staking page.

If a staking program pays a stated annual rate, rewards follow the standard formula:

Reward = Staked amount × Rate × (Days staked ÷ 365)

Staking is meant to reward people who stay, and to give holders something to do besides watching a chart.

10. The Lucky Draw Game

This is the feature that makes NOV19 different. Participants can enter the lucky draw by paying a small entry fee. Once qualified, they get a chance to win the latest games and airdrops.

The chance of winning is straightforward. In a draw with N entries and one prize, if you hold m entries:

Probability of winning = m ÷ N

If there are k separate prizes, the chance that a given single entry wins one of them is k ÷ N. You can also estimate what an entry is worth on average:

Expected value of one entry = (Prize value ÷ N) × k

The entry fee is small on purpose. The goal is to let ordinary participants take part, not to make the draw a game for large wallets only. Draw results are announced publicly in our community channels.

Please treat the lucky draw as entertainment with a chance of a reward, not as an investment. Most entries will not win, and that is how any draw works.

11. Roadmap

Phase 1: Presale. Runs until before midnight on 19 November 2026. Wallet connection, contributions and live presale progress on the official website.

Phase 2: DEX listing. Trading opens on a decentralized exchange at launch. Liquidity is added and locked, and the lock proof is published.

Phase 3: CEX listing. After the DEX launch, the team works toward listings on centralized exchanges. Timelines depend on the exchanges, so we will announce each listing when it is confirmed rather than promise dates we cannot control.

Ongoing: Community features. Staking, airdrop campaigns and lucky draws continue through the official website, with new rounds announced in the community channels.

12. Security and Transparency

Here is what we commit to publishing so that holders do not have to take our word for anything:

- Liquidity lock proof, with the lock details
- Team and developer wallet addresses
- The official token contract address
- Clear airdrop and staking rules on the website

Always verify the contract address on the official website before buying. Fake tokens with similar names appear quickly after any launch. Never share your seed phrase or private key with anyone, including people who claim to be part of the team.

13. Community

NOV19 is a community project, and the community decides how far it goes. Join us here:

- Telegram
- X (Twitter)
- Facebook
- Reddit

Official links are listed on the NOV19 website. Only trust links that come from the official site.

14. Frequently Asked Questions

Is NOV19 an investment? Yes, it is a meme token, but please read the disclaimer below.

Does NOV19 give me a chance to win GTA 6? Yes, it gives you a chance to win GTA 6 and a lot of other games.

Which blockchain does NOV19 use? Solana.

Is the liquidity locked? Yes, and the proof will be published on the official website.

Can I stake my tokens? Yes, on the official website. Staking is flexible with no lock periods.

How do I qualify for the airdrop? The requirements are listed on the official website.

15. Risk Disclaimer

This white paper is for information only and is **not financial advice**. NOV19 is a meme coin, and investing in meme coins is very risky. Prices can swing sharply and you can lose everything you put in. There are no guarantees of profit, returns or listings, and the examples in this paper only show how the math works. Only invest money you can easily afford to lose, do your own research, and check the laws in your country before taking part.
